Git Cheat Sheet

Setup

user.email "my-

email@gmail.com"

git repo

attached to your commits and tags

\$ git config --global

\$ git config --global

user.name "Danny Adams"

Start a Project

Create a local repo (omit <directory>

to initialise the current directory as a

Set the name and email that will be

all branches.

working directory

\$ git checkout -b <new-

Download a remote repo Delete a merged branch

\$ ait clone <url>

Make a Change

\$ git init <directory>

Add a file to staging

\$ git add <file>

Stage all files

\$ git add .

Commit all staged files to git \$ git commit -m "commit

message" Add all changes made to tracked files

& commit \$ git commit -am "commit message"

Basic Concepts

main: default development

origin: default upstream repo **HEAD**: current branch

HEAD[^]: parent of HEAD HEAD~4: great-great grandparent of HEAD

By @ Doable Danny

Branches

commits into feature, keeping history

Rebased

Rebasing

\$ git checkout feature S git rebase main Interatively clean up a branches

\$ git rebase -i main

Interatively rebase the last 3 commits on current branch

\$ git rebase -i Head~3

commits before rebasing onto main

Undoing Things Move (&/or rename) a file & stage

move

\$ git mv <existing_path> <new_path>

Remove a file from working directory & staging area, then stage the removal

\$ git rm <file>

Remove from staging area only

\$ git rm --cached <file>

\$ git checkout <commit_ID>

\$ git revert <commit_ID>

Review your Repo

Rebase feature branch onto main (to List new or modified files not vet committed

\$ git status

option

\$ git diff

commit2_ID

\$ git log --oneline

stash@{n} to delete last stash made \$ git stash drop stash@{1}

Delete stash at index 1. Omit

Delete all stashes

List commit history, with respective

\$ git stash clear

Synchronizing

Add a remote repo

View all remote connections. Add -v flag to view urls.

Show changes between two commits

\$ ait diff commit1_ID

changes from within files

\$ git stash -p

\$ git stash list

\$ git stash apply

List all stashes

For untracked & ignored files, add -a flag.

collection of files, or individual

Re-apply the stash without deleting it

Re-apply the stash at index 2, then

delete it from the stash list. Omit

stash@{n} to pop the most recent

Upload local content to remote repo \$ git push <alias>

\$ git stash pop stash@{2}

Upload to a branch (can then pull request)

Show changes to unstaged files. For changes to staged files, add --cached

\$ git remote add <alias>

<url>

Remove a connection

Rename a connection

\$ git fetch <alias>

Fetch a specific branch

\$ git remote remove <alias>

\$ git remote rename <old>

Fetch all branches from remote repo

\$ git remote

Stashing

Store modified & staged changes. To include untracked files, add -u flag.

\$ git stash

As above, but add a comment.

\$ git stash save "comment"

Partial stash. Stash just a single file, a

\$ git fetch <alias> <branch>

Fetch the remote repo's copy of the current branch, then merge

<new>

(no merge)

\$ git pull

Move (rebase) your local changes

onto the top of new changes made to the remote repo (for clean, linear

history)

\$ git pull --rebase <alias>

\$ git push <alias> <branch>

incorporate new changes made to main). Prevents unnecessary merge

List all local branches. Add -r flag to show all remote branches. -a flag for

\$ git branch

Create a new branch

\$ git branch < new-branch> Switch to a branch & update the

\$ git checkout <branch>

Create a new branch and switch to it

branch>

\$ git branch -d <branch>

Delete a branch, whether merged or not \$ git branch -D <branch>

Add a tag to current commit (often used for new version releases)

\$ git tag <tag-name>

Merging Merge branch a into branch b. Add -no-ff option for no-fast-forward

merge HEAD (ff)

New Merge Commit (no-ff)

\$ ait checkout b

\$ git merge --squash a

\$ git merge a

new commit

Merge & squash all commits into one

CAREFUL)

View a previous commit (READ only) Create a new commit, reverting the changes from a specified commit

Go back to a previous commit & delete all commits ahead of it (revert is safer). Add --hard flag to also

delete workspace changes (BE VERY \$ git reset <commit_ID>

Show the diff summary of stash 1. Pass the -p flag to see the full diff. \$ git stash show stash@{1}

stash.
